Stamps Bridge

A free Wix app that connects a Wix store to a Stamps.com account. No Shopify, no ShipStation, no monthly fee in between. Works for any Wix store.

> **In one line:** paid Wix orders go to Stamps.com as a file, labels are printed as normal, and the tracking numbers come back the same way. The app does all the formatting, matching and updating. The only human steps are one download in the morning and one upload at the end of the day.

The problem

- Stamps.com only pulls orders automatically from stores it chose to support, such as Shopify, Amazon, eBay and BigCommerce. **Wix is not one of them**, and Wix confirms there is no direct link.
- The paid workarounds cost money every month: ShipStation starts at about $30 a month for this, and a Shopify store plus the Stamps.com app would be about $600 to $720 a year.

The solution

- **Both tools already accept and produce files.** Stamps.com can import orders from a CSV file and export printed labels, with tracking numbers, to a CSV file. The file is the connector.
- **Stamps Bridge** is a small app that lives inside the Wix dashboard. It writes the file Stamps.com wants, reads the file Stamps.com gives back, and updates the Wix orders.
- Wix runs the app's code, so there is **no server and no hosting bill**. It can be published free on the Wix App Market and open-sourced for any Wix seller with the same problem.
- **Nothing is hardcoded and no AI is used.** Each store uploads its own Stamps.com sample file once and confirms the column matches.

What it costs

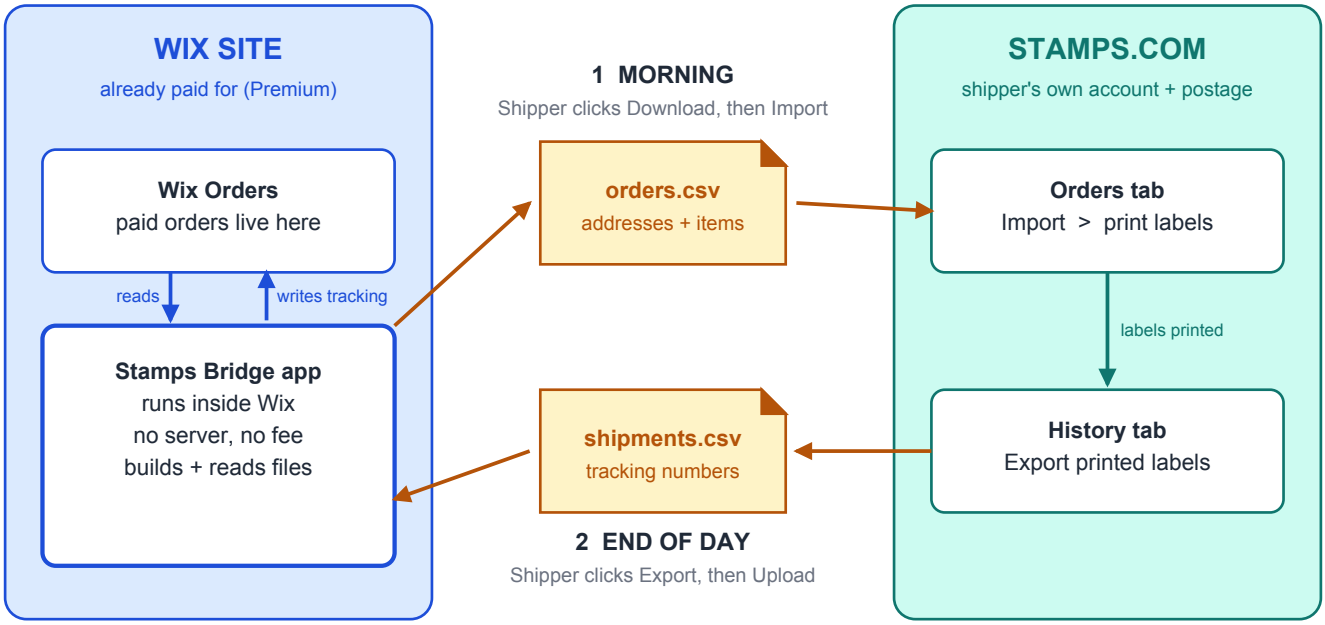

Item	Who pays	Extra cost
Wix Premium plan	Store owner (already paying)	None
Stamps.com account and postage	Shipper (already paying)	None, if their plan includes CSV import
Stamps Bridge app and hosting	Nobody	£0. Free, open source, Wix runs it

What is automatic and what is not

Automatic (the app does it)	Manual (a person clicks)
Finding new paid orders, writing the file, matching tracking numbers, marking orders shipped, emailing customers	One download and import in the morning, one export and upload at the end of the day

How Wix and Stamps.com connect

Wix and Stamps.com never talk to each other directly. Two files carry the data between them, one in each direction. Stamps Bridge sits inside Wix and handles both.

The key that links them: the Order ID

Every row in both files carries the Wix order number (for example **10342**). Stamps.com keeps it on the order it imports, so when the label history comes back the app knows which order each tracking number belongs to. **Still to confirm:** that the history export includes this column. The first real export will show it. If it doesn't, the shipper pastes tracking numbers into the Upload tab instead.

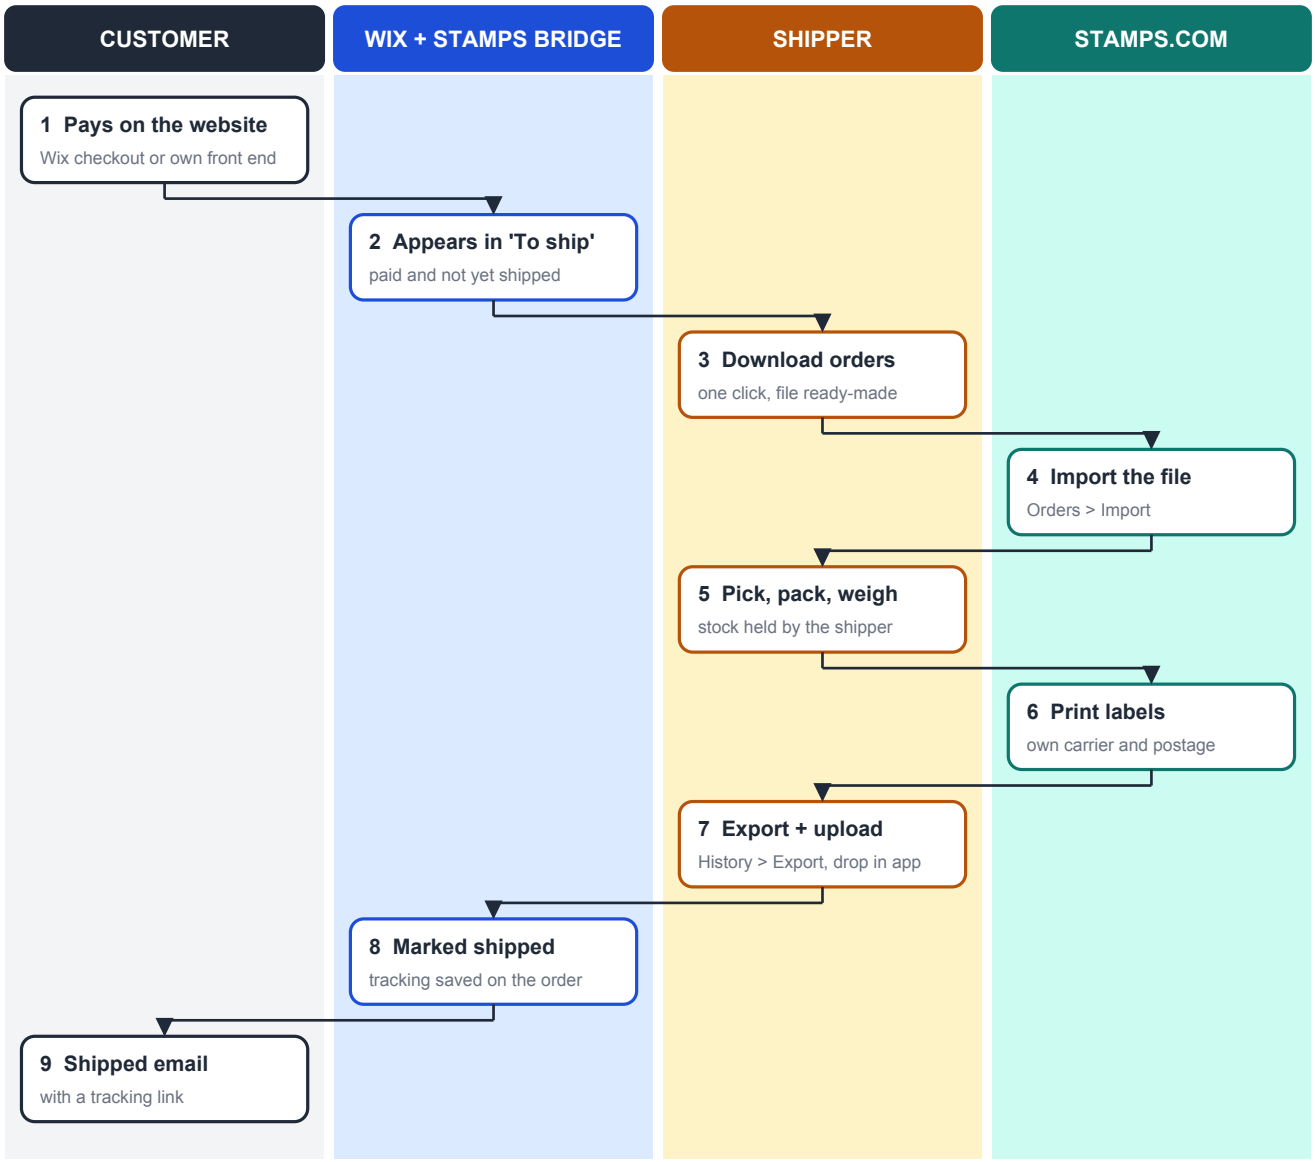

What travels in each file

	orders.csv (Wix to Stamps.com)	shipments.csv (Stamps.com to Wix)
Made by	Stamps Bridge, one click	Stamps.com History > Export
Used by	Stamps.com Orders > Import	Stamps Bridge, Upload tab
Contains	Order ID, name, full address, email, phone, SKUs, item names, quantities, prices, weights	Order ID (to confirm), carrier, service, tracking number, date printed
Safe to repeat?	Yes. Stamps.com updates an order with the same Order ID instead of copying it	Yes. Orders already marked shipped are skipped

Why this is safe to repeat: downloading the same orders twice never creates duplicates in Stamps.com, and uploading the same history twice never ships an order twice. A mistake can be fixed by doing the step again.

The end-to-end process

One order from payment to the customer's inbox. Each column is who does the step.

Steps 2, 8 and 9 happen by themselves. Steps 3 to 7 are the shipper's normal working day with two extra clicks.

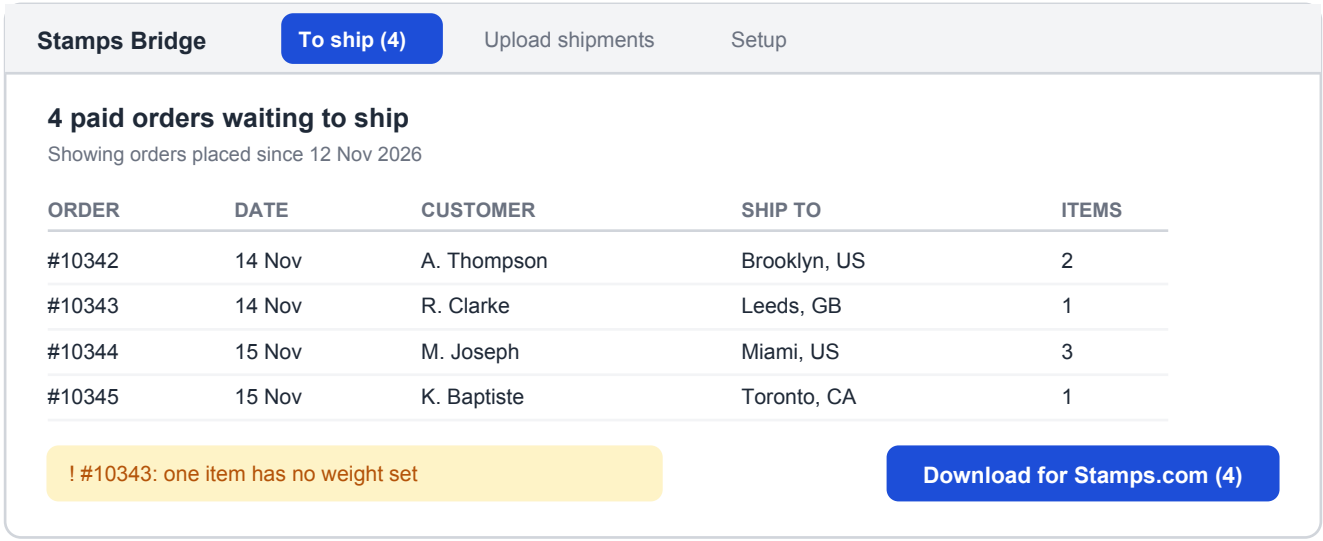

The shipper's daily routine

When	Where	What the shipper does	Time
Morning	Wix > Stamps Bridge > To ship	Click **Download for Stamps.com**	10 sec
Morning	Stamps.com > Orders > Import	Choose the downloaded file, click Import	20 sec
During the day	Warehouse + Stamps.com	Pick, pack, weigh, print labels (unchanged)	as today
End of day	Stamps.com > History > Export	Export today's printed labels	20 sec
End of day	Wix > Stamps Bridge > Upload	Drop the file in, check the list, click **Confirm**	30 sec

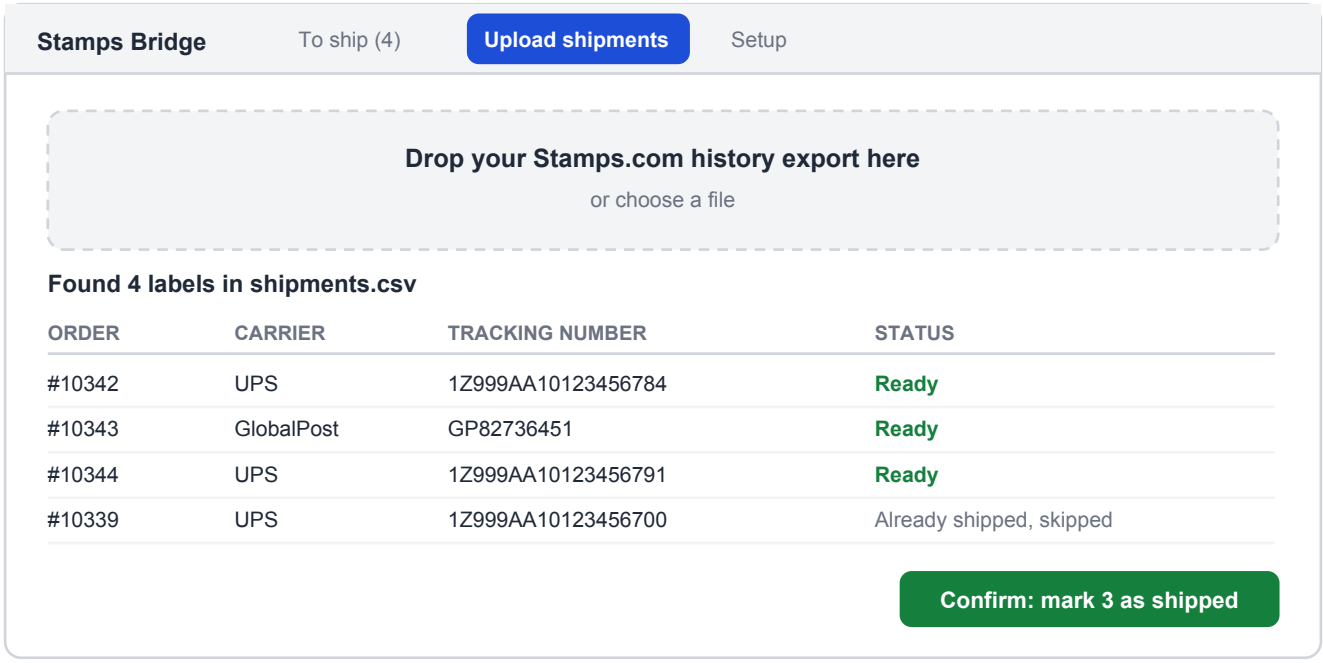

The screens

Stamps Bridge is one page in the Wix dashboard with three tabs. The shipper gets a Wix login limited to this page and the orders list.

Tab 1: To ship

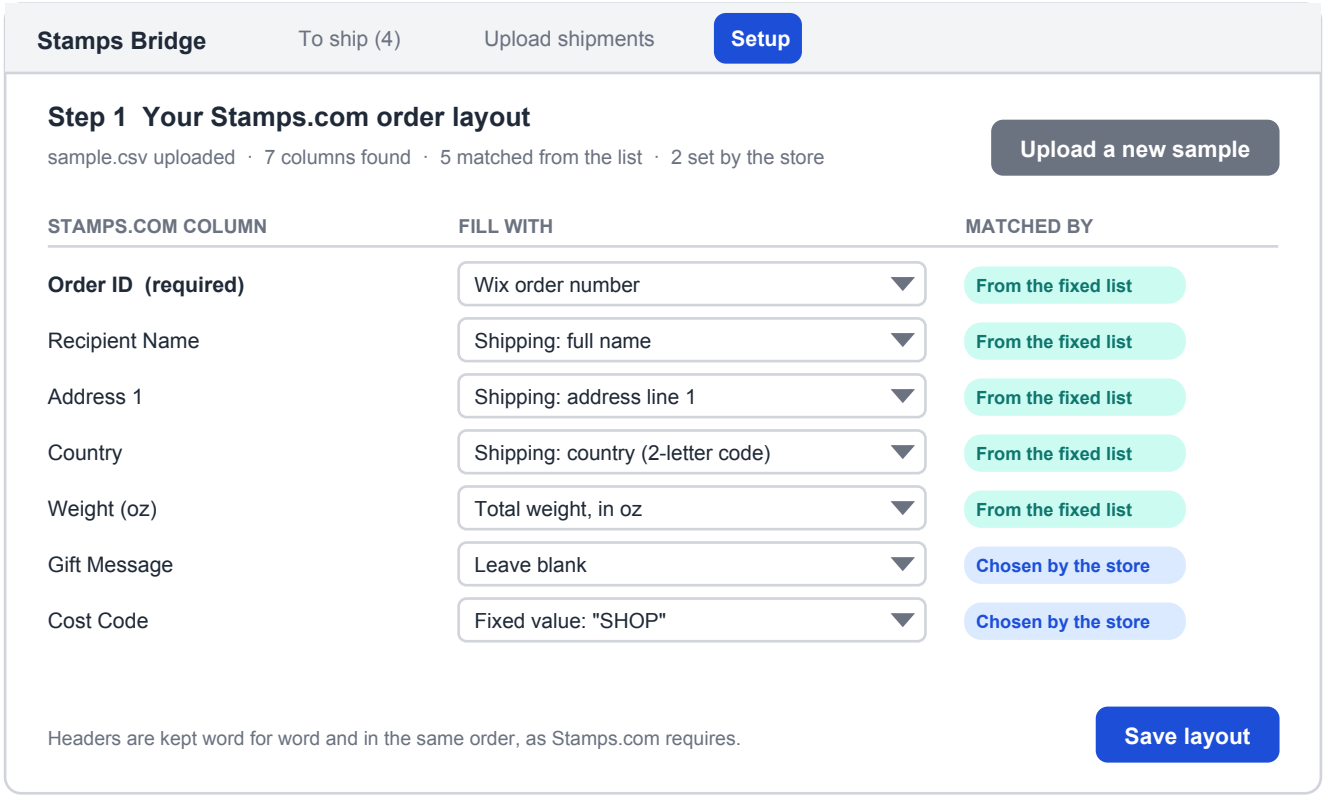

Tab 2: Upload shipments

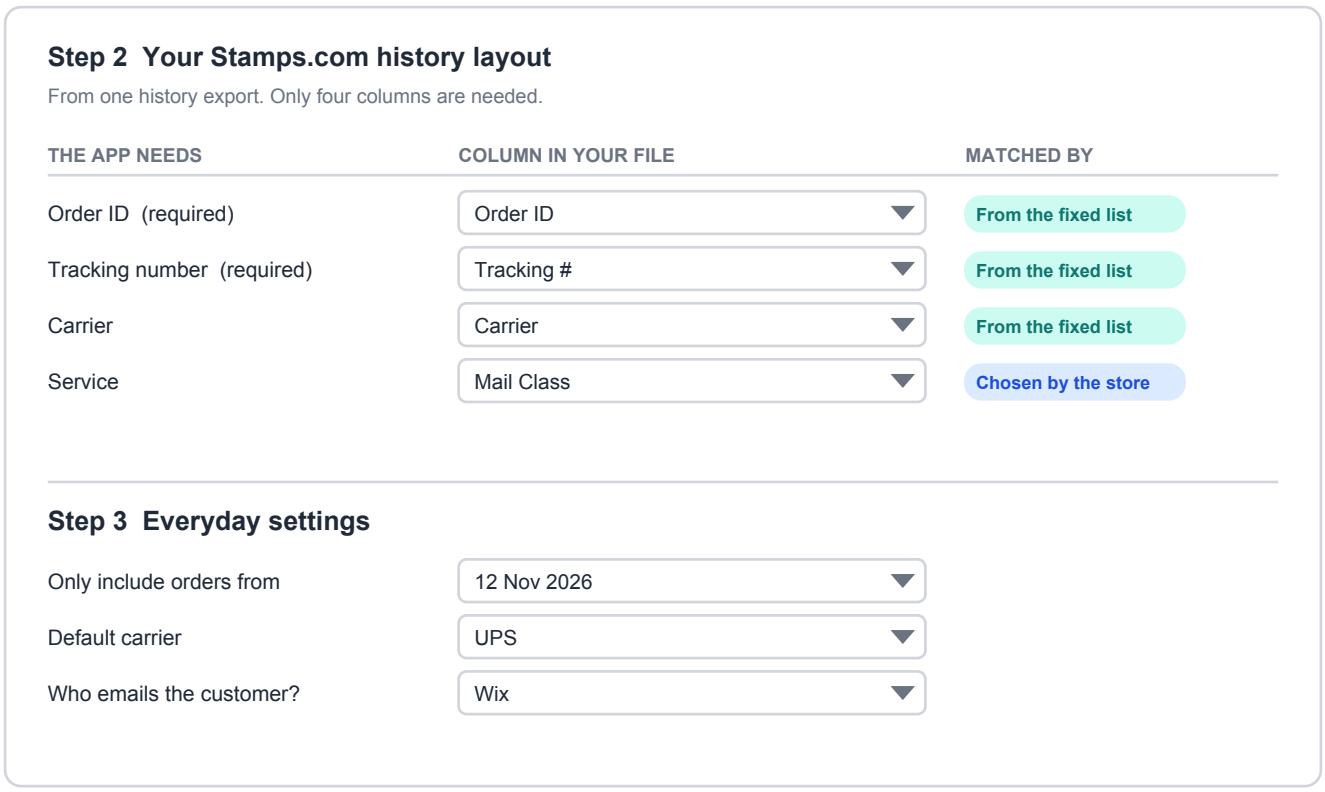

Tab 3: Setup, once per store

Each store teaches the app its own Stamps.com file layout. This is what keeps the app generic: nothing about any one store is written into the code.

- **Upload your sample.csv** (Stamps.com > Orders > Import > Download sample file). The app reads only the header row and ignores the example and notes rows.
- **Check the matches.** Each column is filled from a Wix field, left blank, or given a fixed value.
- **Upload one history export** so the app knows where the Order ID and tracking number are.

No AI, no guessing. The code holds a fixed list of known header names, such as 'Order ID' and 'Recipient Name'. It ignores capitals, spaces and punctuation, then looks for an exact match. A header that isn't on the list is left blank for the store to choose. The same file always gives the same result.

What lives in the code and what lives with each store

In the code (the same for every store)	Saved per store, on its own Wix site
The list of Wix fields that can fill a column	Its sample.csv header row, word for word
The fixed list of known header names	Its column matches and fixed values
Reading and writing CSV files	Its history export matches
Finding orders and marking them shipped	Start date, default carrier, who emails the customer

Safety checks

- No order file can be downloaded until the **Order ID** column is matched.
- An upload missing the Order ID or tracking column is refused, with the missing column named.
- When a new sample is uploaded, the app lists which columns were added or removed before saving.

What everyone else sees

Who	What changes for them
Customer	Nothing new. They order as usual and get a 'Your order has shipped' email with a tracking link.
Store owner	In the normal Wix Orders list, orders move from **Not fulfilled** to **Fulfilled** each evening with tracking attached. Nothing to do.
Shipper	Two extra clicks a day. No retyping of addresses or tracking numbers. Their Stamps.com routine otherwise stays the same.

When things don't go to plan

Situation	What happens
Customer cancels before the download	Cancelled orders are left out of the file automatically.
Customer cancels after the import	The shipper deletes it in Stamps.com. If it is in an upload, the app skips it and flags it.
Address changed after the import	Edit it in Wix, then download again. Stamps.com updates the order because the Order ID matches. Do this before printing.
The same file is uploaded twice	Orders already shipped are skipped. Nothing is sent twice.
A label is printed outside the Orders tab	It has no Order ID, so it shows as 'not matched' and is ignored.
One order needs two parcels	Version 1 saves one tracking number per order. Add the second by hand in Wix.
Label refunded and reprinted	Version 1 skips orders already shipped. Correct the tracking by hand in Wix.
International parcel	Customs details are completed in Stamps.com as today. Item values and weights come through in the file.
A product has no weight or SKU	The To ship tab warns before download, so it can be fixed in Wix first.
Stamps.com changes its columns	Upload a new sample.csv in Setup. The app shows what changed. No code change.
A header isn't on the fixed list	It stays blank until the store picks a match. The app never guesses.

Not in version 1

- Fully automatic transfer with no clicks. Stamps.com does not allow it for Wix.
- Returns, stock syncing between the shipper and Wix, and splitting one order across parcels.

What is confirmed and what still needs checking

Fact	Status	Source
Wix has no direct Stamps.com integration	Confirmed	Wix Help Centre
Stamps.com Online imports orders from a CSV file; only Order ID is required	Confirmed	Stamps.com help: Import Orders from a CSV or TXT File
Re-importing the same Order ID updates the order	Confirmed	Same article
CSV headers must match Stamps.com's sample.csv exactly	Confirmed	Same article
CSV import is only on certain Stamps.com plans	Confirmed. Check each shipper's plan	Same article
Print history can be exported to CSV; columns can be shown or hidden	Confirmed	Stamps.com help: Export Your Print History; History Page
The export includes the Order ID	**Not yet confirmed**	Needs a real export
Wix app can mark an order fulfilled with tracking	Confirmed	Wix developer docs: createFulfillment
That also sends Wix's shipping email	**Not yet confirmed**	Needs a test order
Stamps.com can email tracking itself instead	Confirmed	Stamps.com help: Shipment Notification Emails
Free apps can be published; Wix can host the code	Confirmed	Wix developer docs: App distribution

Needed before building

- **From the first shipper:** the sample.csv from Stamps.com Orders > Import. This also proves their plan has CSV import, and becomes the first real test of Setup.
- **From the shipper:** one Print History export after printing a label for an imported order.
- **A test order** to see whether Wix sends the shipping email when the app adds tracking.

Build order

#	Step	Done when
1	Create the app with the Wix CLI; install on a free Wix test store	The dashboard page appears
2	Build Setup: upload sample.csv, match columns from the fixed list, save per store	A real sample loads and every column is matched or chosen
3	Build the To ship tab and the download, using the saved layout	The file imports cleanly into Stamps.com
4	Build history matching and the Upload tab	A test order shows Fulfilled with a working tracking link
5	Choose who emails the customer	Exactly one email arrives
6	Install on the first live store and set the start date	One real order runs end to end
7	Publish free on the App Market	A second store sets itself up with no code change

Considered and rejected

Option	Why not
ShipStation	About $390 a year, and the shipper would print in ShipStation instead of Stamps.com.
A new Shopify store as a go-between	About $600 to $720 a year (Shopify Basic plus the Stamps.com app). Shopify's $5 Starter plan is closed to new stores.
Stamps.com API	No way to add orders to the Orders tab or read labels printed on the website. Printing through the API would change the shipper's routine.
AI to read the files	Not wanted. A fixed list is predictable and gives the same result every time.
